

Size The number of edges in the graph

$\mathbf{mr}(G)$ The minimum rank of the graph. If the minimum rank was found by hand, then the number is italicized.

LB The maximum lower bound found by the program

UB The minimum upper bound found by the program

Con. “T” if the graph is connected, “F” otherwise. Most of the rest of the bounds are only listed if the graph is connected.

ZFS LB The lower bound obtained from the minimal zero forcing set size

Diam LB The lower bound obtained from the diameter of the graph

CC UB The upper bound obtained from the clique cover number of the graph

NP UB The upper bound obtained from the fact that the graph is not planar (only listed for nonplanar graphs)

NOP UB The upper bound obtained from the fact that the graph is not outer planar (only listed for graphs that are not outer planar)

Path UB The upper bound obtained from the fact that the graph is not a path (only listed for graphs that are not paths)

IS “T” if the graph contains an induced forbidden subgraph for minimum rank 2, “F” otherwise. If “T”, then the graph has minimum rank at least 3; if “F”, then the graph has minimum rank at most 2.

CV “T” if the graph has a cut vertex, “F” otherwise

Tree “T” if the graph is a tree, “F” otherwise

Table 1: Table of minimum ranks

2 Selected optimal matrices

There are some graphs in Table 1 for which the program was not able to determine the minimum rank. For most of these graphs, we now list in Table 2 optimal matrices which show that the lower bound found by the program is indeed the minimum rank (i.e., the optimal matrices listed in Table 2 are evidence that the italicized numbers in Table 1 are correct). The minimum ranks of the remainder of the graphs (graphs 558, 669, 678, 679, 791, 1086, and 1135) are determined in [2, Proposition 4.1].

For a computer-readable version of the data in Table 2, see the `data/` directory accompanying this paper. The `data/minrank-witnesses.sage` is the *Sage* source code that contains the optimal matrices and can be loaded into a running *Sage* session or pasted into a *Sage* notebook cell, while the `data/Matrix_Witnesses.sws` file is an equivalent *Sage* worksheet that can be uploaded and used in the *Sage* notebook.

Table 2: Selected optimal matrices
